

WHAT IS MY MINERAL ASSET WORTH?

First International Bank & Trust Mineral and Land Services Department takes a technical approach in preparing an independent reserves evaluation and appraisal of your minerals.

We will utilize best practices in petroleum reservoir engineering to perform Decline Curve Analysis on your wells to estimate the remaining value of those active wells, along with explaining the potential of future activity specific to the geology and region of your mineral, royalty, and/or working interest.

Strategically located in the heart of the Williston Basin, our Watford City, ND headquarters grounds us close to the action and our clients. Our team of oil and gas professionals have 70 collective years of experience working in both conventional and unconventional resource plays. Utilizing industry best practices, your mineral appraisal well valuation will closely follow the same principles employed by the oil and gas companies developing your minerals.

Decline-Curve Analysis

Producing Property & Future Well Valuation

Reserve Analysis

Detailed Technical Report

“We use the same analysis tools that are used by the major oil and gas companies to calculate reserves, build decline curves, and determine future cash flow. All of these tools and techniques are based on sound reservoir engineering principles and are used to arrive at the value of your mineral rights.”
